About Me

I am Fatih Özveren, an experienced backend developer specializing in software engineering. I have expertise in various backend technologies such as PHP, SQL, Rest API, Laravel, Python, Django, and PostgreSQL. I continue to develop software solutions with the experience I have gained from real-world projects, working on high-traffic projects with global brands and managing large datasets.

Skills

- Php, Laravel, PhpStorm
- Javascript, Nodejs, WebStorm
- Python, Django, PyCharm
- SQL, PostgreSQL, Datagrip

Tools

- Github, Gitlab, Soap, Postman, Jira, Slack, Rancher, Sentry, Trello, SonarCloud

Work History

Orphex • Backend Developer 2023-07 - Current

Orphex is an advanced digital marketing and user behavior analysis platform that simplifies scattered data into actionable insights and recommendations. By integrating with major platforms it analyzes marketing performance, user behavior, and budget allocation.

- Engineered robust backend applications utilizing Laravel and Django frameworks, managing intricate MySQL and PostgreSQL databases; implemented unit testing with PHPUnit, achieving a 95% code coverage and enhancing application reliability.
- Ensuring data storage in the cloud with AWS S3 integration and integrating with platforms such as Amazon, Meta, Criteo, Google Ads, Google Analytics, TikTok, Snapchat, and Adjust.
- Designed and implemented robust algorithms for data processing that improved efficiency by processing 2M+ records daily, significantly enhancing the speed of generating actionable reports for operational teams.
- Performing version transitions and collaborating with the frontend team by providing API endpoints.

Firat University Digital Transformation and Software Office • Backend Developer 2021-12 / 2023-06

Firat University Digital Transformation and Software Office is a unit within Firat University that focuses on developing essential real-world projects to support the university's digital transformation efforts.

- Developed backend applications using PHP and the Laravel framework to support various university projects.
- Managed and maintained MySQL databases to ensure efficient data storage and retrieval.
- Conducted data analysis and developed algorithms to optimize university processes and applications.
- Specialized in SOAP and REST APIs, and utilized the Swagger package to document and streamline API development.
- Provided robust and secure endpoints for the frontend development team, ensuring seamless integration and functionality.
- Established the largest API data distribution platform among universities in Turkey, enabling seamless integration and data sharing with other universities.

Education

Firat University, Software Engineering (2021 - 2025, Current GPA: 3.20)

Lublin University of Technology, Computer Science (Erasmus+ Program, 2023 - 2024, GPA: 3.47)

Languages

Turkish (Native)

English (C1)

German (A1)

Projects

Orphex (Backend)

Firat API Data Center

Firat University Expertise Search System

Firat Academic Information System

Strengths

- **Advanced Problem-Solving Skills:** Ability to identify and resolve complex technical issues efficiently.
- **Effective Communication:** Proficient in conveying technical concepts to non-technical stakeholders and collaborating with cross-functional teams.
- **Time Management:** Skilled in prioritizing tasks and meeting project deadlines consistently.
